1 PROBLEM STATEMENT

Fitness Tracker is SPA (Single Page Application) for placing a request for appointments, view appointments, contact us.

The core modules of fitness tracker app are:

- 1. Landing Page
- 2. View Appointments3. Place Appointment
- 4. Contact Us

The scope includes developing the application using toolchain mentioned below.

2 PROPOSED FITNESS TRACKER WIREFRAME

UI needs improvisation and modification as per given use case.

2.1 HOME/LANDING PAGE

6 Business-Requirement:

As an application developer, develop frontend, middleware and deploy the Fitness Tracker App (Single Page App) with below guidelines:

US_01 Landing Page/Home Page As a user I should be able to visit the home page as default page. Acceptance criteria: 1. User can click any button given in menu bar. As a user I should be able to post an appointment Acceptance criteria: 1. As a user I should be able to furnish following details at the time of placing an appointment 1.1 Name 1.2 Age 1.3 Email 1.4 Mobile No 1.5 Address Line 1 1.6 Address Line 2 1.7 City 1.8 State 1.9 Country 1.10 Pin Code 1.11 Trainer Preference	User Story #	User Story Name	User Story
Acceptance criteria: 1. User can click any button given in menu bar. As a user I should be able to post an appointment Acceptance criteria: 1. As a user I should be able to furnish following details at the time of placing an appointment 1.1 Name 1.2 Age 1.3 Email 1.4 Mobile No 1.5 Address Line 1 1.6 Address Line 2 1.7 City 1.8 State 1.9 Country 1.10 Pin Code			As a user I should be able to visit the home page as default page.
1. User can click any button given in menu bar. US_02 Post Appointment As a user I should be able to post an appointment Acceptance criteria: 1. As a user I should be able to furnish following details at the time of placing an appointment 1.1 Name 1.2 Age 1.3 Email 1.4 Mobile No 1.5 Address Line 1 1.6 Address Line 2 1.7 City 1.8 State 1.9 Country 1.10 Pin Code			Acceptance criteria:

Acceptance criteria:	US_04	Post Contact Us	As a user I should be able to post a feedback/query/message

 As a user I should be able to furnish following details at the time of filling contact us form
a. Name
b. Email
c. Phone
d. Message
2. Message should not go beyond 200 characters.
3. All four fields must be mandatory.
4. A success or failure message should be visible after submit
button clicked.

7 RUBRICS/EXPECTED DELIVERABLES

7.1 REST API (PRODUCTS & FRAMEWORKS -> COMPUTE & INTEGRATION):

- **a.** Use Spring Boot to version and implement the REST endpoints.
- **b.** Implement HTTP methods like GET, POST, PUT, DELETE, PATCH to implement RESTful resources:

GET	/api/v1.0/fitnesstracker/contacts	Get all contacts
GET	/api/v1.0/fitnesstracker/appointments	Get all appointments
GET	/api/v1.0/fitnesstracker/appointments/ <email></email>	Get all appointments of a user
POST	/api/v1.0/fitnesstracker/appointments	Post new appointment request
PUT	/api/v1.0/fitnesstracker/appointments/ <id></id>	Update appointment request
DELETE	/api/v1.0/fitnesstracker/appointments/ <id></id>	Delete appointment request

- **c.** Use necessary configuration in place for REST API in application.properties or bootstrap.properties or application.yml; whichever is applicable.
- d. Package Structure for Spring Boot Project will be like com.fitnesstracker.* with proper naming conventions for package and beans.
- e. Use configuration class annotated with @Configuration and @Service for business layer.
- f. Use constructor-based dependency injection in few classes and setter-based dependency injection in few classes.
- g. Follow Spring Bean Naming Conventions

7.2 DATABASE (PRODUCTS & FRAMEWORKS -> DATABASE & STORAGE):

- 1. As an application developer:
 - a. Implement ORM with Spring Data MongoRepository and MongoDB. For complex and custom queries, create custom methods and use @Query, Aggregations (AggregationOperation, MatchOperation, AggregationResults), implementation of MongoTemplate etc as necessary.
 - b. Have necessary configuration in place for REST API in application.properties or bootstrap.properties or application.yml OR Java based configuration; whichever is applicable.

7.3 API DOCUMENTATION (PRODUCTS & FRAMEWORKS -> COMPUTE & INTEGRATION):

- 1. As an application developer:
 - a. Document REST endpoints with OpenAPI or Swagger

7.4 Messaging (Products & Frameworks -> Compute & Integration):

1. As an application developer:

- a. Have a centralized logging system
- b. Be able to communicate using a messaging infrastructure.
- c. Use KafkaTemplate for communication with Springboot and topics in kafka.
- d. Use kafka for messaging infrastructure and implement producers to write messages/tweets to topic and consumers to read messages/tweets from topic.
- e. Configure Springboot app to log all logging messages to kafka.
- f. Configure all kafka related configuration needed for Spring Boot in *.properties or *.yml file.

7.5 Log/ Monitoring (Products & Frameworks -> Governance & Tooling):

- 1. As an application developer:
 - a. Containerize the complete application, which includes front-end, middleware and kafka (consumers and producers) using docker and Dockerfile.
 - b. Use .dockerignore as necessary to avoid containerizing un-necessary packages.
 - c. Integrate Spring Boot Actuator with Prometheus and Grafana to monitor middleware.
 - d. Implement logs with logstash.
 - e. Open the preconfigured Logstash in Kibana and check if it successfully connect to Elasticsearch Server.

7.6 DEBUGGING & TROUBLESHOOTING

1. Generate bug report & error logs - Report must be linked with final deliverables which should also suggest the resolution for the encountered bugs and errors.

8 PLATFORM

8.1 COMPUTE

- 1. Use ECS CLI (as an alternative to AWS Management Console) for container management and deployment of spring boot application. You should be able to explain and demonstrate the same in interview.
- 2. Use NoSQL instance of AWS DynamoDB/Aurora(SQL) as a database for the Tweet Application

8.2 COMPUTE, IDENTITY & COMPLIANCE, SECURITY & CONTENT DELIVERY

- 1. Use AWS Lambda and AWS Aurora to build a backend process for handling requests for Tweet App.
- 2. Use Serverless Java Container using AWS ECS and run the tweet app created with Spring Boot inside AWS Lambda.
- 3. Use Amazon API Gateway to expose the Lambda functions built in the previous step to be accessible on public internet.
- 4. Use AWS ELB to configure the auto-scaling container instances.
- 5. Configure AWS SNS to issue messages whenever a ELB scales-up and scale-down container instances

9 METHODOLOGY

9.1 AGILE

- 1. As an application developer, use project management tool along to update progress as you start implementing solution.
- 2. As an application developer, the scope of discussion with mentor is limited to:
 - a. Q/A
 - b. New Ideas, New feature implementations and estimation.
 - c. Any development related challenges
 - d. Skill Gaps
 - e. Any other pointers key to UI/UX and Middleware Development
